

WAVE-FORMS[™] acoustic panels from Vibrant Technologies are a totally new concept in acoustic treatments. Acoustic fabric in a variety of colors is formed over a light weight thermoplastic panel. The result is an acoustic panel that provides damping at higher frequencies and diffusion at middle and lower frequencies.

CX-24

CV-24

WAVE-FORMS[™] are available in any of 48 different fabric colors or, for use as a diffuser panel, without fabric covering in either black or white. Panels can be easily installed with construction adhesive, nails, staples or screws. Panel sizes also permit installation into a standard 2' x 2' ceiling grid.

Note- WAVE-FORMS[™] panels are constructed of U.L. fire rated 94-V.O. material. The fabric covering is rated Class A. Always check local codes before installing these or any acoustic products that cover a large area of any room.
